

Child Abuse Incidents

Reported in the Media for October 2023

This information is the result of the aggregation and verification of reported cases of violence against children in the media for October 2023. Since January 2023, PEACE/ECPAT Sri Lanka has been sharing similar information in the form of a monthly newsletter with a range of stakeholders. We believe that sharing this information with a wider audience is to everyone's benefit.

The Media Monitoring Team of ECPAT Sri Lanka has collected and collated information on all forms of incidents of violence against children during the month of October 2023. We gathered information on 86 such incidents by reviewing various media outlets, which fall under 11 main categories of violence against children.

According to our data, the highest number of reported incidents are related to sexual abuse, accounting for 35% of all reported cases of violence against children in October 2023. Thirty-one individuals of the total 93 were accountable for this violation. Forty-four percent of incidents affected the female child, while 33% affected the male child. The age category of 15-18 years old was the most affected with 27 cases. Colombo reported the highest number of child abuse incidents with 10 cases. The relationship between the victim and abuser was not available in 30% of the cases.

Child Abuse Categories

TYPES OF CHILD ABUSE INCIDENTS REPORTED BY MEDIA IN OCTOBER 2023

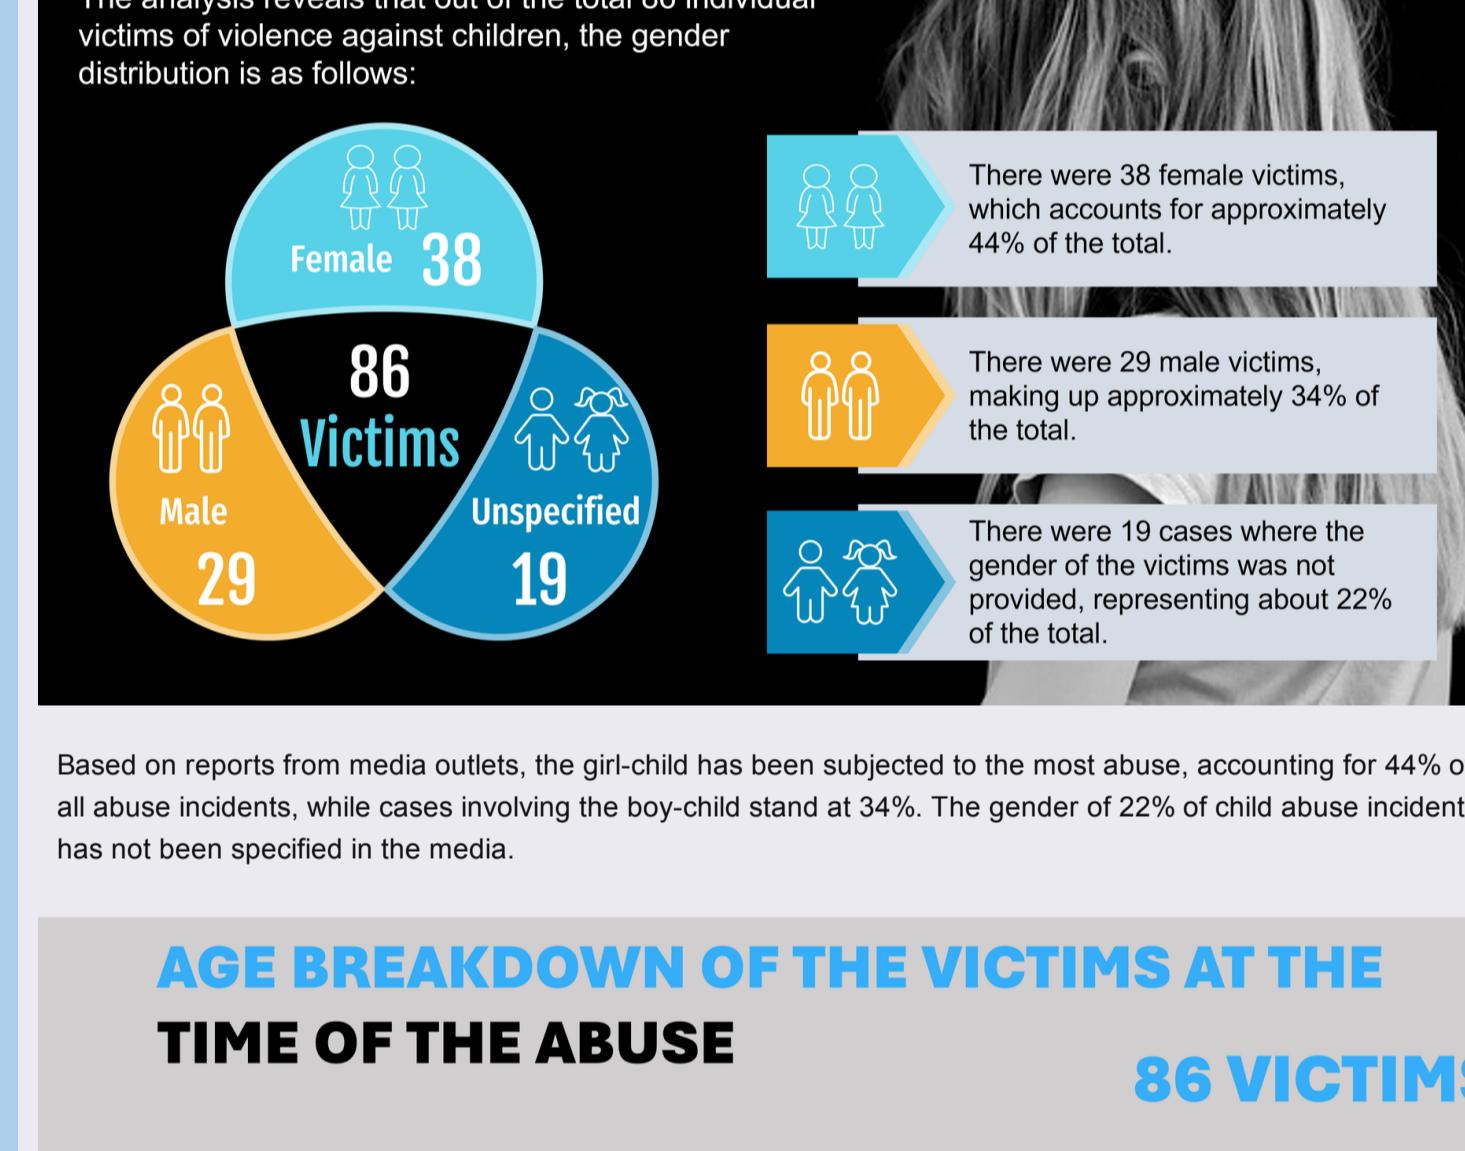

86 INCIDENTS

Out of the 86 incidents observed, we reiterate that sexual abuse has been the highest form of crime reported in media against children in the month of October 2023, at 30 incidents. Second, in its place is physical abuse of children, recording 14 incidents, and third is negligence towards children, with 11 incidents. According to data collated for this month, we also find that the number of children being introduced to addictive drugs is on the rise. This menace needs immediate attention from authorities, standing at 9% of the total number of incidents. The rate of suicide among children is also on the rise at 9%. Research states that the majority of children and adolescents who attempt suicide have a significant mental health disorder. 7% of incidents attempted murder of children. According to the reported data, three children have gone missing. Two incidents of child homicides, which represent the extreme form of violence against children, have also been reported. Additionally, two cases of abduction, two cases of emotional abuse, and one case of abandonment have been reported.

NUMBER OF VICTIMS INVOLVED IN EACH CATEGORY

119 VICTIMS

The data presented above highlights the various forms of victimisation that children have experienced. A concerning trend that emerges is the high number of cases involving neglect, with 39 victims recorded. Sexual abuse is another distressing category, with 30 cases reported. The next victims of physical abuse stand out with 19 children. There were 9 reported victims of suicide, 5 targets each of attempted murder and missing. Additionally, there were 02 children affected by emotional abuse, abduction, and homicide, while 01 child was reported as abandoned. It is alarming to see instances of attempted murder, homicide, and suicide affecting children, emphasising the urgent need for intervention and support systems to protect vulnerable children.

NUMBER OF INDIVIDUALS RESPONSIBLE FOR EACH CATEGORY

93 INDIVIDUALS

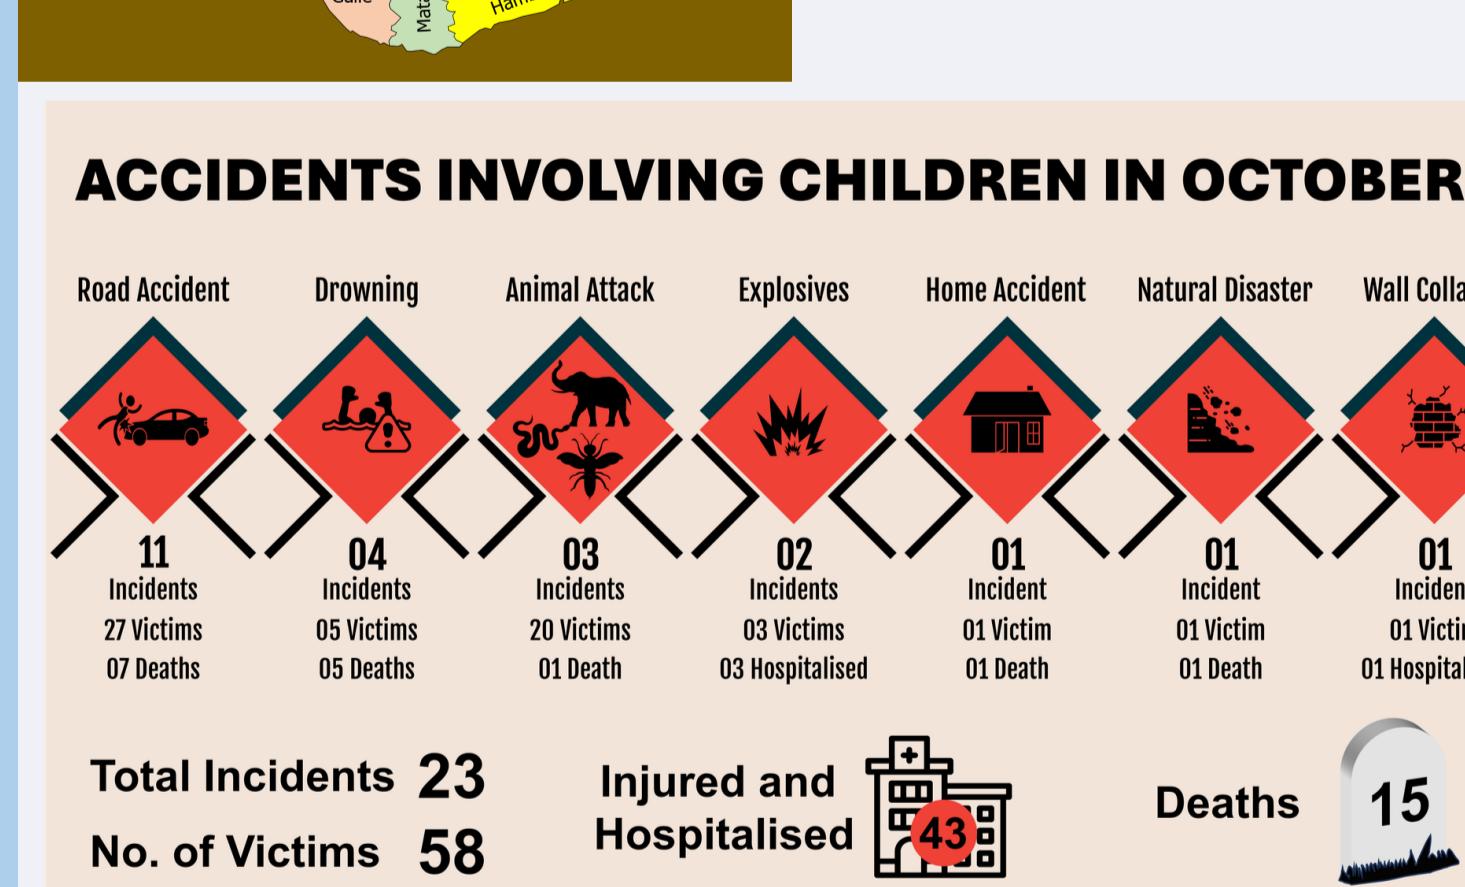

The processed data shows that 32 perpetrators were responsible for the sexual abuse of children. 17 perpetrators being responsible for the physical violence against young ones. 11 perpetrators accounted for the abuse of the child through negligence. There were 8 perpetrators involved in drug abuse, while 8 children tragically took their own lives. 7 attempts of murder against children, 3 responsible for missing, 2 offenders each responsible for the emotional abuse, homicide and abduction of children.

The sad part is that almost all of these child abusers are products of the education system in Sri Lanka. The impact of abuse especially sexual abuse on children is much greater as they do not possess the capacity to process their traumatic experiences and as such it is bound to reflect later on in life.

GENDER DISTRIBUTION OF VICTIMS

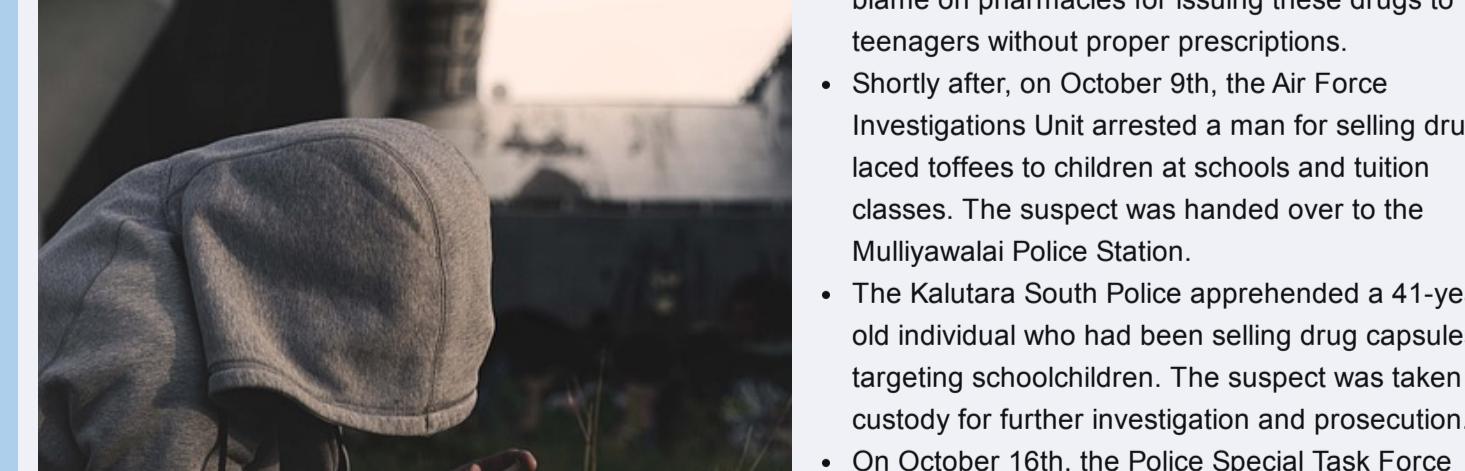

The analysis reveals that out of the total 86 individual victims of violence against children, the gender distribution is as follows:

Based on reports from media outlets, the girl-child has been subjected to the most abuse, accounting for 44% of all abuse incidents, while cases involving the boy-child stand at 34%. The gender of 22% of child abuse incidents has not been specified in the media.

AGE BREAKDOWN OF THE VICTIMS AT THE TIME OF THE ABUSE

86 VICTIMS

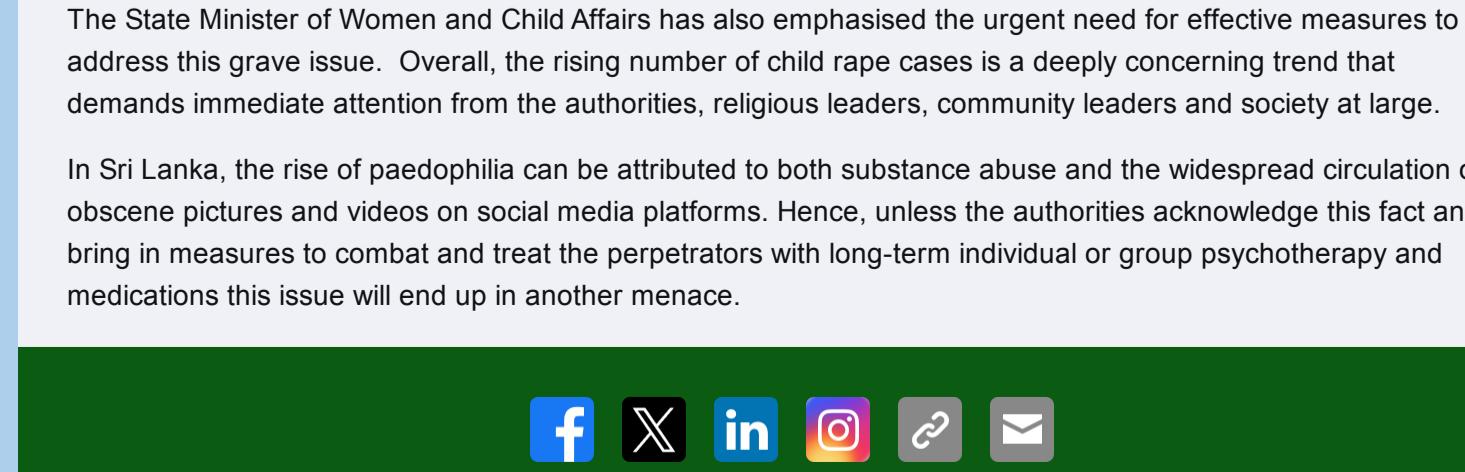

Teenagers between the ages of 15 to 18 years were the most affected age group by violent acts against children, accounting for 32% of the total victims in the month of October 2023. The next age group, 11 to 14 years, accounted for 25%. The age group of 6 to 10 year-olds followed, accounting for 12% of the affected, while the youngest age group, 0 to 12 months old, accounted for nine percent of the victims. The age group of 1 to 5 years old accounted for 6% of the victims.

Sexual abuse was the most prevalent form of abuse among teenagers aged 10 to 18 years. Unfortunately, the age group was not specified in reports of 17% of the media-reported incidents.

An unknown number of children between the ages of 2 to 7 years old were exploited in an incident of Child Sexual Abuse Material (CSAM), commonly known as Child Pornography.

RELATIONSHIP BETWEEN THE ABUSER AND THE VICTIM WHEN THE ABUSE WAS HAPPENING

93 RESPONSIBLE

Among the total of 86 cases involving 93 individuals, 20% of these perpetrators were relatives of the children, while 33% were individuals directly known to the children. Two percent of the perpetrators were strangers, and 44% of the perpetrators were not specified in the reports. The lack of data on perpetrators in ongoing cases may stem from a combination of factors, including legal constraints, privacy considerations, and the sensitivity of child abuse cases.

Geographical Distribution

Based on reports from media outlets, the girl-child has been subjected to the most abuse, accounting for 44% of all abuse incidents, while cases involving the boy-child stand at 34%. The gender of 22% of child abuse incidents has not been specified in the media.
